

## **PLANTING INSTRUCTIONS**

### **Autumn Beauty Sunflower Mix**

Grow these sunflowers in a sunny location and in somewhat fertile well-drained soil. Keep soil weed free and moderately moist while plants are young.

Once established, Sunflower plants are somewhat drought and heat tolerant. They will flower mid-summer through fall. Birds (and bees!) are attracted to the seeds.

Space the Sunflower seeds 6 inches apart, cover the seeds 1/2 inch deep, and thin the Sunflower seedlings to 12 - 18 inches apart.

Direct seed (recommended) - After last frost. Transplant - Sow in final container 3-4 weeks prior to planting out. Dislikes root disturbance.
