Lyson Bottling Tank Quick Start Guide

Setup:

1. Clean tank interior with warm water and soap before first use. Be sure to keep electronic controller unit dry. Rinse clean and dry with a cloth.
2. Close honey gate, and fill tank with honey.
3. Program the Controller:
 - a. Plug controller into 120V outlet and turn on switch (side of controller). Allow the controller time to turn on.
 - b. Hold + and - buttons to enter programming mode.
 - c. Set Temperature and Time for each stage. Use + and - to adjust each. Use On/Off button to cycle through Temp, Hours, and Minutes of each stage.

Recommended settings for decrystallizing honey (change as needed):

Stage	Temperature	Time
1	T1=45 °C (113 °F)	1h00m
2	T2=50 °C (122 °F)	1h00m
3	T3=55 °C (131 °F)	32h59m

4. Press Power button to start heating. The heater will click on and off as the thermostat controls the temperature of the heating jacket. Heat honey as long as desired. Each time unit is turned on, the program will restart at the beginning of the cycle. If longer heating time is desired, increase the duration of each cycle to the maximum value.
